Sulitest Concept Note

Today's world is complex, interconnected and in perpetual transformation.
Even small decisions can impact our global society.
How do we elevate awareness of key global challenges worldwide and
support individuals, political and economic leaders, and all decision-makers
in integrating an understanding of these systemic concerns in their daily practices?

Sulitest is a movement whose **mission is to support expanded sustainability knowledge, skills and mindset** that motivates individuals to become deeply committed to building a sustainable future and to make informed and effective decisions.

Inspired by the United Nations Conference on Sustainable Development, RIO + 20 (Article 47 of the final document), Sulitest was one of the first 17 featured initiatives of United Nations Partnerships for Sustainable Development Goals. Led by an independent NGO and co-created with a community of users and a network of contributors, Sulitest is supported by more than forty international institutions and networks such as UNESCO, UNEP, UNGC PRME, GRLI, IAU and UNDESA.

Sulitest offers a set of **online tools for raising awareness and improving understanding of the** 17 Sustainable Development Goals (SDGs) of the 2030 Agenda for Sustainable Development. Every July, Sulitest presents its annual report during the High-Level Political Forum (HLPF) held at UN Headquarters

Its best-known tool, the **"Test"** is in an **easy-to-use, on-line, multiple choice question format** that consists of **an international set of 30 questions** (the "International Core Module") randomly selected from an expert-approved database. Each "Test" question is based on a matrix including an extensive variety of topics - approved by an independent board - and aligned with one or more goals of the Global Agenda, helping to create the largest database **mapping citizens' awareness of the SDGs**.

In addition to the **"International Core Module"**, optional **"Specialized Modules"** of 20-questions each **focus on either a specific geographic area, or a specific topic.** A geographic module considers national, regional and cultural specificities (environment, laws and practices). Examples of topical modules are the ones created by UNDESA, on the SDG process and on SDG7 (Energy). Other tools include a 10-questions interactive gaming tool (the **"Quiz"**), a 10-questions introductive MCQ (the **"Explorer"**), and **"Customized Modules"** that can be created by the user with questions specific to their needs (organizational, classroom, training, other). Recently, the educational interface **"Looping"** was created to offer a learning mode based on the reverse pedagogy. More modules and tools are in development.

Sulitest is proud of **more than 140,000 tests taken** on all of the five continents. Initially deployed in the academic world (100 universities with more than 150 tests), Sulitest tools are now available **for any kind of organization** (Corporations, NGO, Institutions…). Join the movement…

Tangible implementation of

One of the featured initiatives on UN partnership for

Non-profit organisation (Association loi 1901 N° W133022480)
Observer status to the UN Environment Assembly (Accreditation 430/218)
Special consultative status with the Economic and Social Council since 2019

The Sulitest Content Matrix

Covering a sample of the full scope of sustainability concepts and SDG-related challenges

15 Subjects on Knowledge, in 4 themes

Sustainable humanity & ecosystems on planet Earth

Global & local human-constructed systems

Transitions towards sustainability

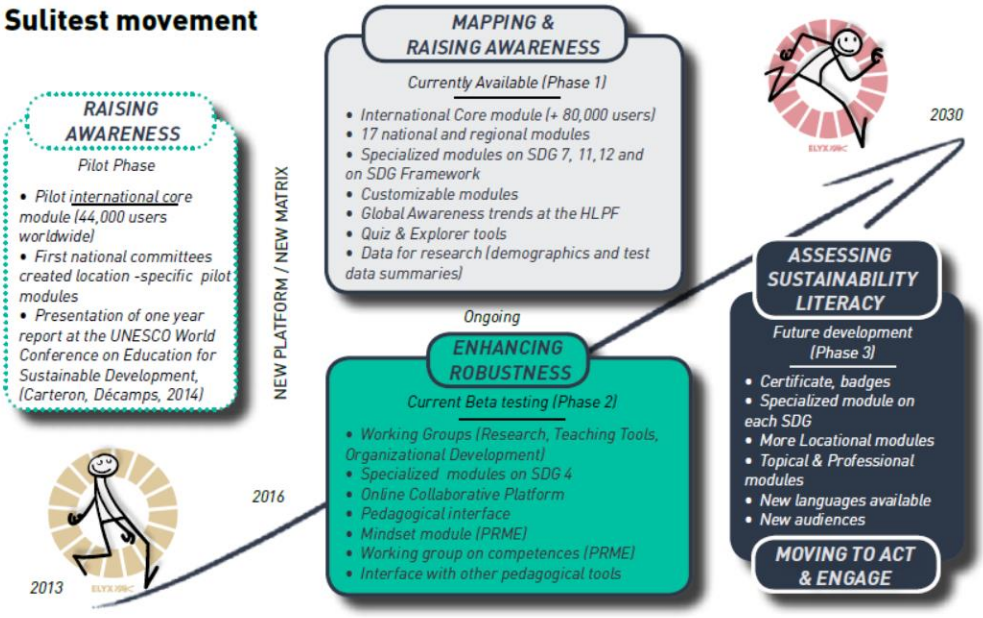
We each have roles to play to create and maintain individual and systemic changes

9 Subjects on Skills, in 3 themes

- *Personal skills*
- *Working with other*
- *Think & act systemically*

6 subjects on Mindset

- *Respect & care for the community of life*
- *Humans part of nature, not separate*
- *Holistic vs. mechanistic approach*
- *Golden rule*
- *Belief one can initiate & reinforce change*
- *Active commitment*

Sulitest: a community-based movement in development


A roadmap to address users and stakeholders' needs
